

Hull City Hall - Technical Data Sheet

Flying Facilities

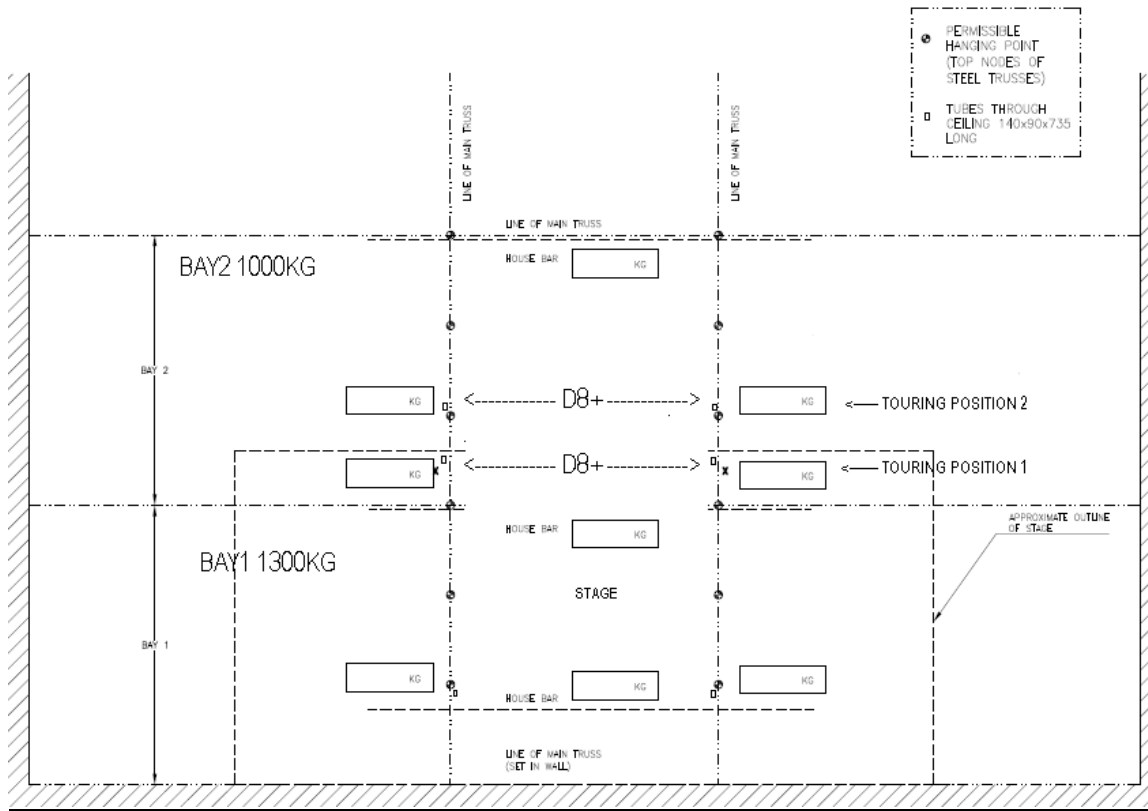

The Hull City Hall has a back box truss installed in Bay 1 which is able to lift 900kg - alternatively the box truss can be removed if touring trusses are required for the production but house motors would remain in situ for the set up - which would allow 650kg on each D8+ chain hoist. Bay 1 has a maximum loading of 1300kg.

Bay 2 has a maximum loading of 1000kg - if both bays in use - not to exceed 2300kg in total. The venue has 2 x fly positions in Bay 2 with D8+ motors for touring trusses/equipment. There are also 2 x permanently rigged box trusses which can lift 300kg each – please note if used the weight on these trusses will count towards the overall weight limit as they are positioned in Bays 1 and 2.

Bay 4 has a permanent delay PA truss rigged which covers the Balcony and Gallery with a maximum load of 500kg.

Please note Hull City Hall does not have a house rigger and all flying will be inspected by Hull City Council's Structural Engineer.

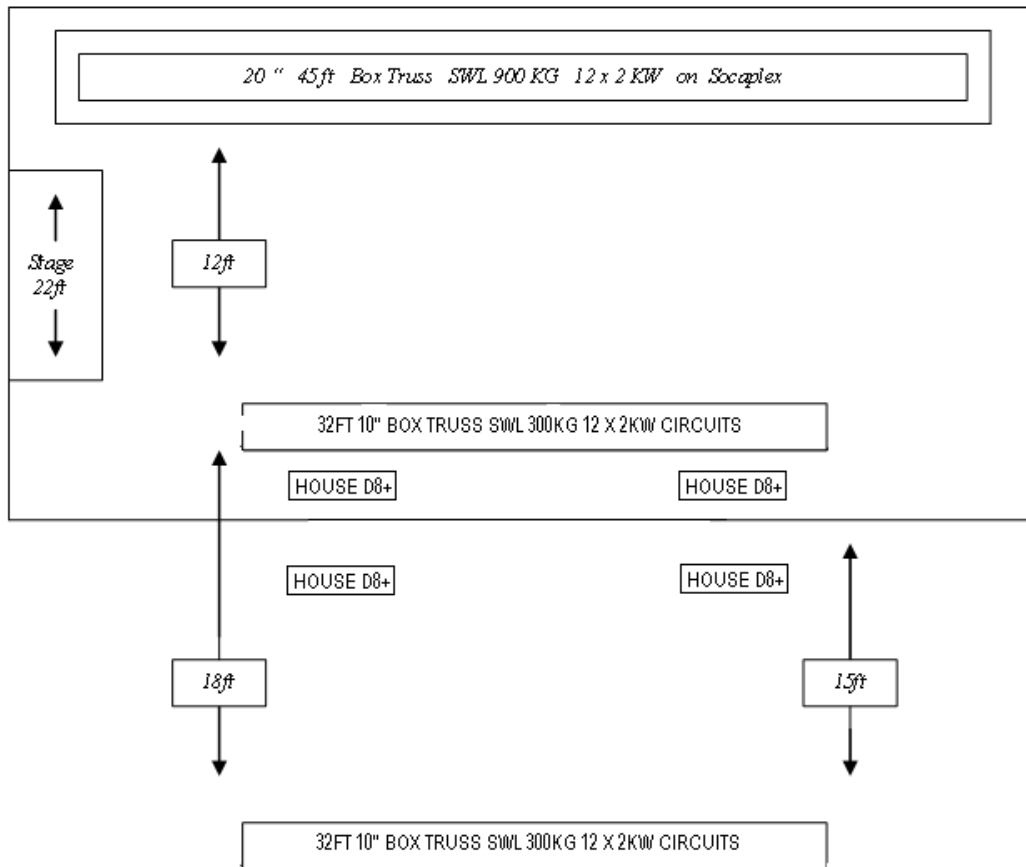

Fly Point Positions

Main Hall and Stage

House Truss Positions

Dimmer Circuits

12 x 2k circuits on 15amp plugs - house truss 1.

12 x 2k circuits on 15amp plugs - house truss 2.
